INFRASTRUCTURE

THE CHALLENGE

New Era of Threats: Drone Threats

The necessity for security at various aerial levels is more vital than ever. Traditional security measures such as access control, perimeter fences, ground sensors, and surveillance cameras are no longer sufficient to combat the new threats that have emerged from the democratization of drones. A drone threat involves the use of unmanned aerial vehicles (UAVs) by criminal and terrorist organizations to survey, infiltrate, or assault high-value targets. This surge in drone threats is due to the increasing availability and affordability of drones, making them accessible tools for malicious activities.

Implementing Drone Security

Security personnel now confront new and evolving challenges due to the rise and use of drone technology. Operating at aerial levels, drones can easily bypass traditional security measures, posing significant detection and response challenges. These small, quiet drones require quick, effective countermeasures. Drone security implementation involves integrating detection and countermeasure systems seamlessly with existing security systems without causing disruptions.

THE SOLUTION

Comprehensive Airspace Awareness

MyDefence provides comprehensive airspace awareness at your designated locations. The area surrounding your location will be passively scanned, and notifications will be issued when a drone is detected nearby.

Seamless Subscription Service

We understand the importance of ease and efficiency in security solutions. That is why our service requires no prior knowledge or installation of hardware on your part. Subscribe to our data service to avoid the costs and complexities associated with purchasing and maintaining physical hardware. With MyDefence, you are not just investing in a product; you are subscribing to peace of mind, knowing that our expertise and technology are continuously working to safeguard your airspace.

Engagement

01

Establish Requirements

Audit Your Security Needs

We assess your security requirements to tailor our solutions specifically to your needs.

02

Assess Current Security

Simulation Program

MyDefence sets up an actual drone threat scenario to infiltrate your airspace and simulate potential threats.

Exercise and Assessment

A red team exercise will be conducted to evaluate your security and risk levels. A comprehensive threat assessment report will be provided at the end, based on the findings of the exercise.

03

Activate Counter-Drone Security

System Implementation

We implement the counter-drone system, which may include both software and hardware components depending on your designated location.

04

Join the User Board

User Board Membership

After acquiring our service, your company will have the option to join our User Board. You will be invited to various events throughout the year, which include networking opportunities, demonstrations of new equipment, and sessions discussing the latest technologies and threats.

Why MyDefence

Founded in 2013, MyDefence specializes in OEM counter-drone systems, utilizing cutting-edge RF (Radio Frequency) technology. We provide comprehensive counter-drone solutions tailored to the unique needs of both military and civilian sectors. Our offerings are modular and scalable, ensuring they can be customized to address a wide range of security requirements. Headquartered in Denmark, with additional offices in the US, we demonstrate our global reach and commitment to innovation. Our products seamlessly integrate into existing security frameworks, providing robust protection across various environments. We proudly hold ISO9001:2015 certification, highlighting our dedication to quality and excellence. Follow us on LinkedIn or visit our website to stay informed about our latest developments.
