

MyDefence expands U.S. operations with local production and additional veteran expertise

American production and U.S. defense know-how fuel next phase of growth

Oklahoma City, OK – Oct. 7, 2025 – MyDefence today announced the launch of production at its new Oklahoma City facility, expanding its year-long U.S. R&D presence and ensuring its counter-UAS solutions are developed, manufactured, and supported within the United States, while reinforcing its commitment to partner with the U.S. Department of War and Federal Government to deliver technical overmatch at the point of need.

“Local production enables flexible scaling, instant delivery, and ongoing support, while also ensuring our systems are available directly off the shelf - fully plug-and-play and mission-ready.” said William Ostrowski, President of MyDefence North America

By producing in the United States, MyDefence guarantees speed to the end user and secured supply chain. *“This expansion reflects a long-term commitment to America’s defense community. Producing here means trusted supply, strict compliance, and proximity to the mission”* said Dan Hermansen, CEO of MyDefence.

In 2025, the U.S. Department of Defense procured \$33 million USD in MyDefence systems following extensive evaluation and testing. This milestone has opened the path for expanded acquisitions, reinforcing confidence in MyDefence’s reliability and operational performance. The order pipeline continues to strengthen, with additional defense stakeholders adopting the technology.

“The U.S. Army has tested our systems under the most demanding conditions and chosen them again for their proven performance. With acquisitions expanding across defense divisions, MyDefence technology demonstrates the highest standards, and our mission remains clear: to stand with those who defend America, delivering reliable protection against evolving drone threats.” said Ostrowski.

Veterans are at the core of MyDefence

At the core of MyDefence’s U.S. operations is a veteran-led team with experience across all services, border security, and defense domains, ensuring solutions are reliable, intuitive, and capable of near-autonomous performance. Strengthened this fall with a dedicated U.S. mission support team and R&D capability, MyDefence is combining American production with global expertise to deliver counter-UAS solutions that protect America and its allies, reinforcing its long-term commitment to U.S. mission partners.

About MyDefence

MyDefence specializes in modular, scalable C-UAS solutions engineered for complex radio-frequency environments. Its technologies are fielded globally by armed forces and security agencies, enabling proactive defense against unmanned systems across diverse mission sets.
