Danish Counter-Drone Company Takes Aim at Poland's Drone Crisis

Danish counter-drone firm, MyDefence has planted its flag in NATO's fastest-rearming nation, opening a Warsaw office as Poland races to close its drone defence gap.

Warsaw, June 1, 2026. Danish counter-drone company MyDefence has established a permanent presence in Poland, appointing Paulina Epler as Country Director. Paulina most recently served on the board of Raytheon Polska, where she played a key role in expanding the company's operations and reinforcing its long-term presence in the Polish defence market

The new office gives MyDefence a dedicated presence in Poland - one of few Danish defence tech companies to have one. Poland has committed to spending 5% of GDP on defence in 2025, the highest share of any NATO member.

Paulina's career spans both sides of Polish defence procurement: she has held roles at the Polish Air Force HQ and Polish Defence Holding, and built her industry experience at PIT-RADWAR and Thales Polska. Before joining Raytheon. At Raytheon Polska held board responsibility for growth strategy and regulatory compliance, including industrial cooperation obligations with Polish state-owned partners.

"Poland is investing in air defence at a pace we have not seen in a generation, and the window to establish real partnerships, not just sales relationships, is right now," said Dan Hermansen, CEO of MyDefence. *"Paulina has built those relationships from both sides of the table. That is exactly what this market requires."*

MyDefence produces counter-drone detection and defeat systems currently deployed with NATO-member armed forces. Paulina will lead engagement with Polish defence authorities, the armed forces, and industry partners from the Warsaw office.
